# NEED FOR DATA CENTER

---

- Lack of knowledge of what's being collected
- Data scattered among many different agencies
- Too much data and too little data
- Long waiting period to get data
- Data may not be meaningful if not in context
- May not be reliable, valid, collected consistently
- Lacking: data over time, national/county comparisons
- Insufficient expertise and resources to retrieve data

# **DATA CENTER: HAWAII'S AGING**

---

## **Aim**

- **To provide valid, reliable, timely data**
- **To provide a “one-stop” center**
- **To deliver data in user friendly format**
- **To assist larger pool of clients cost effectively**

# USES OF THE DATA CENTER

---

- **Decision-making and policy development**
- **Program development and grant writing**
- **Community development efforts**
- **Advocacy efforts**

## Hawaii's Aging

### Search Indicator Database

The indicator database provides data on the well-being of older adults and the aging in Hawaii. Data is available at the national, state or county levels.

# **INDICATORS: SELECTION CRITERIA**

---

- **Easy to understand by community audience**
- **Based on reliable data from credible sources**
- **Objectivity based on substantial research that connects indicators to the status of aging in Hawaii**
- **Measured periodically**
- **Representative of large segment of aging population**
- **To the extent possible, data available at the national, state and county levels**

## Publication Details

Item 6 of 12 results

Title: Transfer of Patients from Acute to Long-Term Care: Influence of Patient Characteristics on Waiting Period

Author(s): Epure, James P.; Blanchette, Patricia Lanoie

Document Type: Journal Article

Publisher: Hawaii Medical Journal, Vol. 61 No. 10 (2002)

Pages: 222-230

Availability: [Full text](#) 

Descriptors: facility beds; long term care; nursing homes; social workers; wait list

Abstract: Hawaii's number of nursing home beds per capita is much lower than the national average, making it difficult to transfer some hospitalized patients to long-term care facilities. We prospectively followed patients wait-listed for nursing home placement in two Honolulu hospitals and found several patient characteristics that impeded transfer. These results could be used to help with long-term care planning.

Record Number: 403
